always the best climate

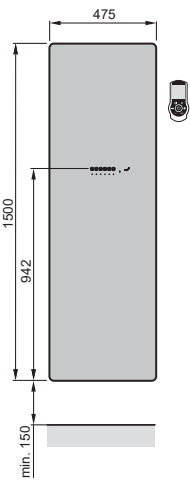

## Zehnder Deseo Verso

The Deseo Verso electric glass radiator from the Zehnder Studio Collection combines a modern design with exceptional comfort and outstanding functionality. The elegant black, white or even reflective heated glass front makes this decorative radiator an eye-catching feature that fits perfectly into all kinds of bathroom designs. Additional special features for users: One or two extendible towel rails, depending on the model, which can be mounted on the back of the radiator. This allows the towels to “disappear” behind the glass front and keeps the bathroom looking neat and tidy. Additionally, the towels are always cosily warm because they are kept behind the radiator. The convenient push-to-open and push-to-close towel rail function makes it easy to hang towels on the rails. During installation, customers can also choose whether the towel rails should extend to the left or right, ensuring maximum flexibility when it comes to bathroom design. With its state-of-the-art infrared technology, this decorative radiator provides comfort in next to no time. Furthermore, the smooth glass surface is easy to clean, ensuring a high level of hygiene in humid bathroom environments. Last but not least, Zehnder Deseo Verso is incredibly easy to operate using either an intuitive control panel on the radiator itself or the convenient remote control option. Every detail perfectly thought out.

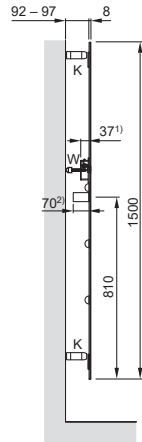

## Advantages

- Minimalist, contemporary design
- Practical: extendible towel rail on the back of the radiator ensures a tidy bathroom
- Heated glass front provides pleasant warmth in next to no time
- Convenient operation via control panel or remote control
- Available for electric operation
